

RUSHIL ZAVERI

☎ +1 (263) 881-4963 ✉ rushilzaveri28@gmail.com 🔗 linkedin.com/in/rushilzaveri 🐙 github.com/RushilZaveri

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL

Frontend: React, TypeScript, HTML5, CSS3, Responsive UI Development

Backend: Node.js, Express.js, Flask, Django, Spring Boot, RESTful APIs, Microservices Architecture

Databases: MySQL, PostgreSQL, MongoDB (NoSQL)

Cloud & DevOps: AWS (EC2), Docker, Kubernetes, Git, CI/CD

AI & Data: Hugging Face, LLM Integration, Machine Learning Pipelines, Data Processing

Core CS: Data Structures, Algorithms, Object-Oriented Design, Distributed Systems

Education

Concordia University

Master of Applied Computer Science

Sep 2024 – May 2026 (Expected)

Montreal, QC

Charotar University of Science and Technology

Bachelor of Engineering in Information Technology

Oct 2020 – May 2024

GPA: 9.44 / 10

Experience

Quantinent Analytics

Full Stack Software Engineer

Oct 2023 – May 2024

Ahmedabad, India

- Developed full-stack analytics applications using React, Node.js, and MongoDB to visualize complex insurance and risk datasets across more than 5 internal dashboards.
- Built 10+ RESTful APIs using Node.js and Express within a scalable microservices-style architecture to process and serve analytics data to internal reporting and visualization tools.
- Implemented interactive geospatial analytics using Mapbox API, enabling visualization of thousands of location-based insurance records.
- Designed data processing modules to transform raw datasets into structured formats, reducing dashboard data load time by 25%.
- Collaborated with product managers and data teams in 2-week Agile sprints to deliver data-driven product features and improve analytics workflows.

Longswitch Solutions

Software Developer Intern

May 2022 – Jul 2022

Surat, India

- Developed responsive user interfaces using React to support web-based business dashboards and data-driven workflows.
- Integrated frontend components with RESTful APIs to securely retrieve and display application data stored in MongoDB (NoSQL) databases.
- Implemented dynamic data visualization components and optimized rendering performance, reducing page load time by 20%.
- Worked closely with backend engineers to validate API contracts and ensure reliable data flow between the application layer and database systems.
- Participated in Agile development processes including version control, automated testing practices, and code reviews to maintain production code quality.

Projects

AI-Powered Expense Tracking Platform | *React, Node.js, Express, MongoDB, AWS, Hugging Face*

- Built a full-stack expense management platform enabling users to track spending, categorize transactions, and visualize financial trends.
- Developed a responsive frontend using React and TypeScript with reusable components, dashboards, and dynamic data visualizations.
- Implemented backend APIs using Node.js + Express to manage authentication, transaction processing, and financial data aggregation.
- Integrated LLM-powered expense insights using Hugging Face models to generate transaction summaries, suggest spending categories, and answer natural-language questions over user expense data.
- Designed MongoDB schemas for efficient storage of user accounts, transactions, analytics data, and AI-generated insights.
- Deployed the application on AWS EC2 and containerized services for reliable cloud-based access and scalable API integration.

Multilingual AI Text Detection System | *Python, PyTorch, Hugging Face*

- Built an end-to-end AI pipeline to detect machine-generated text across multiple languages using the COLING-2025 MGT dataset containing 963K+ samples.
- Developed preprocessing and data transformation pipelines to clean, tokenize, and prepare multilingual datasets for model training.
- Implemented classical NLP baselines (TF-IDF + Naive Bayes / Logistic Regression) and deep learning models including CBOW embeddings.
- Fine-tuned bert-base-multilingual-cased (mBERT) achieving 90% classification accuracy and 0.90+ macro-F1.
- Designed modular inference pipelines enabling scalable experimentation and integration with production-style ML workflows.
